

Generating Documentation with Enterprise Architect

Course Overview

The generation of quality documentation to a recognised corporate standard is a very important task in systems design. This course explores the techniques for producing quality documentation using Enterprise Architect.

Duration

1 day

Suitable For

- Business Analysts
- System Architects
- Developers

Course Contents

- Overview of producing documentation using Enterprise Architect
- HTML documentation
- Customisation of the output of HTML documentation
- RTF documentation using the templates as supplied with Enterprise Architect
- Producing customised templates
 - Selecting the content
 - Specifying the data to be output
 - Formatting the output
 - Use of tables
- Filtering and selecting the project content using report options, properties and model documents
- Use of model documents, Enterprise Architect master documents and Word master documents
- Fine tuning of documentation output by using RTF bookmarks
- Introduction to producing Word documents directly by using an Add-In to Enterprise Architect

Prerequisites

Attendees to this course should be familiar with Enterprise Architect (version 7.1 and above).

Course Delivery

The course is delivered using a mixture of formal instruction and practical exercises. The emphasis is on the practical aspects of producing documentation using Enterprise Architect and attendees will be provided with an electronic Enterprise Architect project for their practical exercises.

Attendees are also encouraged to bring their own Enterprise Architect projects, and if applicable their own documentation templates to supplement their practical experience.

As part of the course the instructor will be able to offer advice of how to produce documentation for attendee's specific projects.

Deliverables

All attendees will be provided with

- a printed bound copy of all course material including exercises
- electronic Enterprise Architect project
